## Planting the Seeds of Sustainability at Sungei Kadut

LHT Holdings launched Singapore's first wood waste recycling plant in 1999, and it has invested resources to improve its processes and products in the years since. This focus on innovating for sustainability aligns with JTC's plans to reimagine Sungei Kadut into an eco-district where industries can utilise technology for productivity and the environment. LHT is building a new five-storey factory within Sungei Kadut that aims to be completely zero waste. Named the Envirohub, it will feature smart systems to improve operations and produce technical wood from recycled wood waste.

## Creating Beneficial Synergies Through Circular Economy

Getting onboard the circular economy is one of the ways companies can build resilience. After all, a closed-loop approach to sustainability allows companies to optimise their resources and reduce inefficiencies, at the same time creating beneficial synergies for growth. A long-time tenant in Sungei Kadut, Samwoh Corporation, is already looking forward to the synergies it can create with its neighbours.
